֍ Quantum Entanglement's Irreducible Complexity Within the Self-Replicating DNA's Fractal Antenna ֍

"*In a nutshell, the DNA replicates itself*" – Craig Venter, Director NHGRI

Irreducible in time, scope and measure, the self-replicating Deoxyribo-Nucleic-Acid genetic code carbon-copy blueprint-template cannot also be evolving at the same time. The whole function of the DNA code is to prevent biological evolution from one *kind* of organism into another *kind*. DNA is not a lifeform in and of itself, but it contains all the necessary information to construct and support the lifeform. The lifeform or organism exists because of the self-replicating DNA, and the DNA exists because of the reproducing lifeform. One cannot exist without the other. The whole is not greater than the sum of all its constituent parts because it takes life to create life. The microscopic quantum super computer within the nucleus of every cell in our bodies is the most sophisticated on earth. DNA replication cannot be rivaled by manmade artificial intelligence created in the image of man himself. Now a self declared creator, in defiance of his own Creator, creates quantum super computers programmed to replicate themselves. This type of sophisticated technology can only be achieved with human intelligence. Irreducible complexity makes it physically impossible for the DNA to replicate itself and also be evolving at the same time because evolution demands change. Changes within the DNA occur in the form of degenerative mutations devolving into abnormalities, cancers, diseases and death. Mutations breakdown the organism's ability to carry on life; as a result, mutations in the DNA does not produce life-giving benefits to the organism. "Insanity is doing the same thing over and over again and expecting different results." *Albert Einstein. Each one of us is unique, yet the human species is the same.

The DNA replicates itself in order to perpetuate its own *kind*. All living organisms continue to reproduce after their own *kind* without a single exception. Like begets like, a dog is a dog is a dog and a chicken is a chicken. What started first? The DNA or RNA? The chicken or the egg? First, the chicken is hatched out of an egg laid by a fully formed adult hen, it is fertilized by a fully formed adult rooster who passes on his fully formed genetics stored deep within his fully functioning DNA code. Assuming that it took a long period of time, random chance and mutations for irreducible complexity of the self-replicating DNA gradually evolving into a chicken, how then does Darwin's Origin of Species By Means of Natural Selection begin to explain the original fully formed hen and rooster in the first place? All the super-numerous necessary components of an organism must be fully present and functioning within the DNA/RNA code for fertilization, meiosis (hereditary transmission of dominant and recessive genetic traits), mitosis (prophase, metaphase, anaphase and telophase) to birth and for development into adulthood. It is categorically wrong to assume that chickens evolved from the Tyrannosaurus Rex, or to assume that humans evolved from apes. Chicken species can only reproduce more chickens, and as many different **variations** of chickens as there are, all chickens will always reproduce chickens because chicken DNA replicates itself. Now that the chickens have come home to roost, Jacob's ladder winds up to heaven like a spiral staircase leading us full circle back to where we started, with Genesis documenting the origin of all life. To perceive God's timeless signature (ATCG) as the interwoven pattern in the temple-template of one's innermost being leads mankind to God consciousness. (1 Corinthians 12: 21-25)

The infinitely complex and perfectly precise double helix DNA-RNA nucleotide generating-zipper sequence, is perhaps the greatest discovery in the history of *mankind*. The self-replicating DNA's genetic code contains all the necessary details and information composing a living organism all packed into a tiny macro molecule wound up around itself in four nucleotides. ATCG is an asymmetrically bilateral quaternary code like written text in a genetic book. These four basic building blocks, **adenine** and **thymine**, **cytosine** and **guanine**, lock and unlock a corresponding sequence of four sets of triplets, base sets of codons, 64 codonic arrangements of elemental sets generate the genetic code 4^3 metric. The genetic interlocking sequence must be fully completed before the next transcriptional sequence can begin. Any mutational change within the genetic code during transcription is automatically seen as a degenerative error to be corrected or rejected. Otherwise, the nucleotide sequence ceases to continue, and chaos within the cell would evolve into cancerous tumors, deformities, or a host of disabling diseases.

Astonishingly complex bio-electromagnetic-chemical processes occurring within our bodies replicate in lightning-quick liquid-light nanoseconds. Out with the old, in with the new, our bodies are completely renewed and regenerated many times over in the span of our lifetime. Evolution's gradual subjective time is not the crystal ball solving the biological question of irreducible complexity. All the necessary parts of any reproducing organism must be fully

present and functioning for life to exist. Once objective time versus subjective time is observed and revealed, the curtain is drawn back and evolution's magic wand becomes nothing more than a piece of holly wood thrown into the fire where it burns up in no time at all. Both observable and repeatable, our objective present time is real and not a subjective theory. The question is not whether biological life evolved through the passage of subjective time; the question is, why do biological lifeforms persist to reproduce their own *kind* through the passage of objective time, the answer to the question is within DNA replication. When enough people believe in a past that never actually happened, a consequential phenomenon of the Mandela effect manifests artificial evolution = noi←tu←love in the form of irreversible **G**enetically **M**odified **O**rganisms posing an existential threat to all natural organic life on Earth.

Because all life on Earth is precisely calibrated and aligned with Earth's magnetosphere, the DNA acts as a fractal antenna regulating quantum entanglement's irreducible complexity of DNA replication resulting in cell division sexual reproduction and hereditary transmission of dominant and recessive genetic traits; all functioning with the senses and their faculties including orientation, equilibrium, coordination, metabolic regeneration, homeostasis, intuition, consciousness, conscience and spiritual awareness. Water, being liquid light, H2O = E mc^², is the essential basis for all life on Earth. Being 64% to 99% water, our bodies align with the Earth's magnetosphere. Water, a clear liquid compound of two parts hydrogen and one part oxygen, is both an acid and a base containing 64 unique properties. Containing 64 elements, ocean water is the most prolific substance on Earth. Since our bodies are mostly composed of water (similar to sea water), H2O being hydrogen-positive / oxygen-negative, spontaneously positive and negative are automatically calibrated for our equilibrium and balance. Six-sided-hexagonal-honeycombed-clustered-water-snowflake-shaped H2O molecules bond and resonate within the double-helix-spiral-structure of the DNA/RNA where one form of energy is converted into another. Cellular DNA/RNA acts as an electromagnetic energy receiver and transmitter of information to replicate itself. **The superconductive energy for this spontaneous alternating reciprocal transduction is within H2O's fluid properties dipolar molecular interaction's power of attraction and repulsion**. Virtually every physical function, including memory, is regulated by this vital primary process. The mobius H2O figure 8 DNA set represents reciprocal equilibrium of oscillating and intercoupling electrons generating the hydrogen bonds within the H2O molecule clusters joining 2 long chains of nucleotides twisted into a double helix Deoxyribo-Nucleic-Acid. This entwined synthesis of H2O and DNA/RNA is naturally calibrated to polarize and align with Earth's morphogenic electromagnetic field.

(Genesis 1:2-3 and verse 11-12): "And the Spirit of God was hovering over the face of the waters. And God said, "Let there be light, and there was light". Verse 11 "And God said; "let the earth sprout vegetation, plants yielding seed, and fruit trees bearing fruit in which is there seed, each according to its *kind*, on the earth". And it was so. Verse 12 the earth brought forth vegetation, plants yielding seed according to their own *kinds*, and trees bearing fruit in which is their seed, each according to its kind. And God saw that it was good. *(*Psalm 139:13-16): "For you formed my inward parts; you **knitted me together** in my mother's womb. I praise you, for I am fearfully and wonderfully made. Wonderful are your works; my soul knows it very well. My frame was not hidden from you, when I was being made in secret, **intricately woven** in the depths of the earth. Your eyes saw my unformed substance; in your book were written, every one of them, the days that were formed for me, when as yet there was none of them." (See Romans 1:18-20) (Matthew 3:16): As soon as Jesus was baptized, He went up out of the water. -------- (1 John 5:6-8): "This is the one who came by water and blood, Jesus Christ. He did not come by water only, but by water and blood. And it is the spirit who testifies, because the spirit is truth. For there are three that testify: the Spirit, the water and the blood; and the three are in agreement." (2 Peter 3:5): - "But they deliberately forget that long ago by [YHWH's] word the heavens came into being and the earth was formed out of water and by water." (Revelation 1:15): "And His voice was like the roar of many waters." (**waters = waves = frequencies**) - Holy Bible (English Standard Version)

How then do we navigate our journey through the nature of science, and what does the word of God say about it? God's spontaneous acts of creation are perfect and complete because the Creator is perfect and unchanging; His observable creation becomes a direct reflection of His invisible attributes. Genesis, Chapter 1, echoes out nine times the fact that all life was and is being created perfect and whole with the reproductive ability to multiply and perpetuate their own *kind*. DNA replication points the way back to our common ancestry. Genesis being the origin of one human family is a divine creation made in the image of our Father the Creator. "We hold these truths to be self-evident, that all men are created equal, that they are endowed, by their Creator, with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness." – Declaration of Independence. (accreditation): Great ideas stand on the shoulders of many great men; one such man is Michael Behe – Biochemist, Professor of Biology, who introduced the concept of irreducible complexity. *Einstein's 64 field equations. ----- See our website: (BiologicalCompass.com)
